UX/UI & Product Discovery · UX Research · Product Strategy · AI applied to product design

I design digital products end to end (from discovery to technical handoff), connecting research, user experience and business vision. My work lives at the intersection of **Product Design, UX/UI and strategy**: I turn chaotic problems into solutions simple enough to be easily explained. I use **AI as a tool** to speed up discovery, ideation and flow organization, but the decision about what actually solves the user's problem stays with me.

■ EXPERIENCE (product & digital design)

Product Designer & UX/UI Designer · **Freelance / Contract**

since 2021

Digital products for e-commerce, health, influencer marketing, SaaS, games, mobile apps and more

- Full product cycle: discovery, PRDs, business rules, complex flows, interactive prototypes and technical handoff to engineering.
- Creation and maintenance of **Design Systems** to ensure visual consistency and scalability across web and mobile.
- Planning and running **usability tests** with real users to validate hypotheses and reduce friction before delivery.
- AI integrated into the process to accelerate discovery and ideation, without outsourcing the product decision.

Mid-Level Product Designer (UX/UI) · **Airfluencers**

2024 to 2026

São Paulo · remote · SaaS platform

- Led discovery and PRD definition for new product areas, translating business rules into flows and information architecture.
- Redesigned campaign management with creators: **+52% productivity** for the curation team and removal of 3 external tools.
- Research end to end (user journey, competitive benchmarks, behavior and attitude) plus product storytelling for smooth navigation.
- Managed the company's **global Design System**, with process documentation and structured handoff that reduced engineering rework.
- Accessibility and interaction design in the Design System (contrast and WCAG, keyboard and screen reader navigation, accessible components, microinteractions and states), validated in usability tests with real users.

UX/UI Designer · **SmartHint**

2022

Curitiba · remote · Personalization for e-commerce and SaaS, in an agile squad

- Discovery, business rules definition, user flows and mid and high fidelity responsive prototypes.
- Interface componentization and Design System, with close handoff to developers within the sprint rhythm.
- Attitudinal and behavioral user analysis applied to product creation.

■ EXPERIENCE (marketing & graphic design)

Marketing, graphic design & social media

2015 to 2021

Inovação · Flamingo Casa · Supremo Secil · and freelance clients

My background in marketing and graphic design is the foundation of my business vision and of the way I turn message into experience. I worked with **service design** and journey mapping to optimize the experience of clients and internal teams, art direction and visual identity, creation of online and offline pieces, digital content management and media performance analysis. I also presented results directly to leadership based on analytics reports, connecting communication, data and strategy.
